

# ClevercitiCard<sup>®</sup>

## The First Solution for Indoor and Outdoor Parking

**ClevercitiCard** is the first system to seamlessly combine outdoor and indoor parking guidance, including single-space occupancy detection, all in a single credit-card-size smart card. ClevercitiCard's patented solution is designed to provide integrated, frictionless permit payment and parking guidance for drivers, and offers a complete management solution for parking operators in a variety of industries. It can also be used to provide access to gated or secure areas. Organizations can gather new levels of intelligence about their parking operations, and when combined with the Cleverciti parking management platform, this correlated data streamlines parking management and guidance for surface lots and parking garages.

### Intelligence

See parking data and usage statistics in real-time, across outdoor and indoor parking facilities.

### Real-time data

View the exact position of a vehicle, identification of each user and their permit, reservation and payment status.

### Precise guidance

Geofenced push messages sent to drivers identify free spaces upon approach to parking area or garage.

## Intelligence for operators, Simplicity for drivers.

Cleverciti smart parking solutions collect and streamline real-time data to the Cleverciti management platform to enable organizations to see each car, user and the details associated with their account. Parking operators can use this information to gain insight into real-time occupancy statistics and determine whether there is a need to reroute drivers to another area. Motorists benefit from having instantaneous directions to available parking spaces, as well as the ability to save valuable time by automatically paying for parking with the card, without the need to go to any meter or ticket machine. The card identifies the space where the car is parked and starts and ends the payment process

## The Only Parking Solution You Need

With Cleverciti, you can minimize complexity, eliminate expensive infrastructure and reduce deployment times. You'll also make drivers happier.

### Locate

Available spaces from anywhere in real-time.

### Identify

Areas and receive precise directions.

### P Approve

Built-in permit data to locate aligned areas.

### Pay

Secure payment to streamline process.
