

Parking.Logic

Who can you count on to offer a comprehensive parking management system?

SKIDATA - logically.

Powerful

- Unifies the whole experience of the parking management business in one parking management system
- One system fits all parking business segments
- Reliable and economic

Flexible

- Scalable from simple company parking areas to complex cross-linked city parking solutions
- Highly customizable through multiple optional modules in conjunction with comprehensive configuration possibilities, Parking.Logic accommodates almost every customer need

Open

- Comprehensive interfaces and online services open the door for new business segments and ensuring independency as well as investment protection
- Open for every kind of integration, from ERP systems to public transport environments

Confidence by Experience

- New technologies in combination with longtime experienced professionals within the parking business
- Thousands of satisfied customers and installations throughout the world are speaking for themselves
- A reliable partner to move on forward

Properties

- Multi-functional Manual Pay Station for processing & payment of parking tickets and managing sales at your car park.
- Control Center – easy monitoring and control of all devices throughout the parking facility, from entrance and exit columns to automatic payment machines.
- Administration and configuration – from defining sales articles and managing rates to administering customer details and configuring devices. Includes all programs required for administration and maintenance of the entire parking facility.
- Reporting and statistics – flexible financial and operative reports and statistics let you keep track of all the relevant facts and figures at all times.
- Flexibly extensible software functions – over 40 different software modules are available for unlocking to extend the basic software functionality as needed. Enabling parking space reservations, integrating existing data carriers or supporting mobile devices and license plate recognition systems – these are just a few of the wide range of options provided by the SKIDATA Parking.Logic software modules.
- Interfaces allow for a flexible, individual extension of various parts of the SKIDATA parking system. Integration of license plate recognition systems, parking guidance systems or additional hardware such as hands-free ticket reading devices. For further details on extension options see the fact sheet on SKIDATA Interfaces.
- Remote access – various options for remote system access allow full control of the entire SKIDATA parking system from anywhere at any time.
- Security – Parking.Logic is validated in accordance with the latest international guidelines for credit card processing systems (PCI/PA-DSS). This ensures that the parking system software complies with the latest security requirements, and that the SKIDATA software development and maintenance processes are subject to continuous security testing.
